School Sphere: Unique Features

Features most school ERPs don't have, checked against the code (22 Oct 2026)

Features most school ERPs don't have

1. AI assistant built into the app

- "Ask School AI" chat on every page. Students get a study assistant that answers from the school's own uploaded materials and cites the page.
- Teachers generate question papers, exams, worksheets, lesson plans and homework, plus report-card remarks.
- The AI can prepare actions, but the user confirms each one before it runs.
- Flags at-risk students from attendance, results and overdue fees, and explains why.
- Voice input and output, translation into 12 languages (including Hindi, Malayalam, Tamil and Arabic), and a review step before AI content is published.
- Usage and cost tracking, with limits per school and per user. Works with OpenAI, Azure OpenAI, Anthropic or a self-hosted model.

2. Talent showcase ("Creative Campus")

- Students, teachers and parents post their work as images, video or audio.
- Posts go through teacher or admin approval, and people react to them. There are no comment threads.
- Users can report a post, and it hides itself automatically once it gets enough reports.
- Public posts can be seen by other schools, which makes it a cross-school showcase.

3. Built-in live video classes

- Classes run inside the app using LiveKit, so no Zoom or Meet is needed.
- Screen share, recording with visibility settings (staff, students, or students and parents), and live chat with pinned messages.
- Recurring classes, attendance tracking (present, late, partial, absent), browser push reminders, and exportable reports.

4. Help Center with guided tours

- Guides by role and by module, interactive walkthroughs on the real screens, and a PDF user manual generated automatically.
- Questions are answered based on what the user's role is allowed to do: it shows the steps or opens the right screen, and hands over to the AI when it can't answer.

5. Bus tracking with the driver's phone

- The driver's phone sends its GPS location, so no tracking device is needed. Admins and parents see the bus on a live map.

6. Syllabus coverage and exam portions

- Teachers' lesson plans go through approval, and coverage is tracked with on-track / at-risk / behind flags.
- When exam portions are published, it checks whether those topics have actually been taught.
- Parents can see syllabus progress if the school allows it.

7. Sustainability / eco campaigns

- Tree planting and recycling drives with targets and verified results.
- Houses and clubs can be auto-assigned by class, grade, gender, randomly or in equal numbers.

8. Platform-level features (for the vendor, not for schools)

- **Office portal:** sales and billing back-office covering the sales pipeline, trials, quotations, invoices, credit notes and subscriptions. Also MFA, audit logs, and data export and deletion requests per school.
- **Azure dashboard:** cloud cost, resources, health and alerts inside the app.
- **Multi-school setup:** each school gets its own subdomain, branding and letterhead.

Smaller extras: customisable dashboard widgets with tabs per role, Ctrl+K quick navigation, dark mode, visitor watchlist alerts, anonymous helpdesk tickets, and separate student, teacher and staff mobile apps.

More application features

Smart attendance	Manual attendance by class, plus capture modes for QR, RFID, biometric and face recognition.
Multi-channel communication	Send announcements by email, SMS, WhatsApp, push and in-app, with templates, contact groups, scheduled sends and delivery summaries.
Reliable online exams	Six question types, CSV import, shuffled questions and options, a server-side deadline, autosave every 1.5 seconds, auto-marking and a manual evaluation queue.
Multilingual AI content	AI drafting and translation in 12 languages, including Hindi, Malayalam, Tamil and Arabic.
Offline mobile attendance	The teacher mobile app saves attendance offline and syncs it when the phone is back online.
Online fee payment	Parents pay fees online through Razorpay, and the payment is verified on the server.
Certificates and visitors	Bonafide, transfer, character, study, achievement and staff-service certificates printed on the school letterhead. Visitor check-in with badge numbers, pre-approved visits and watchlist alerts.

Lead with: the AI assistant, the talent showcase and built-in video classes.
